TI Mammalian **apoptosis** inhibitor protein gene family, primers,  
probes and detection methods

SO PCT Int. Appl., 218 pp.

CODEN: PIXXD2

IN Korneluk, Robert G.; Mackenzie, Alexander E.; Baird, Stephen;  
Liston, Peter

AB Disclosed is substantially pure DNA encoding human and mouse IAP  
polypeptides; substantially pure polypeptides; and methods of using such  
DNA to express the IAP polypeptides in cells and animals to inhibit  
**apoptosis**. Also disclosed are conserved regions characteristic of  
the IAP family (i.e. **BIR**, baculovirus IAP repeat, and RZF, ring  
zinc finger) and primers and probes for the identification and isolation  
of addnl. IAP genes. In addition, methods for treating diseases and  
disorders involving **apoptosis** are provided. CDNAs for human and  
mouse **xiap** genes and **hiap-1** and **hiap-2** genes were cloned and  
sequenced. The human **xiap** gene was mapped to the X chromosome  
at Xq25 and the **hiap** genes to chromosome 11 at 11q22-23. Recombinant CHO  
cells expressing **xiap** were somewhat protected from cell death;  
cells expressing **xiap BIR domains**-containing  
proteins were strongly protected; and, cells expressing **xiap**  
lacking any **BIR domain** were not protected at all. The  
**BIR**-containing protein fragments localized to cell nuclei. All cancer  
cell lines showed increased IAP expression relative to non-cancer control  
tissue. In Jurkat and HeLa cells induced to undergo **apoptosis**,  
the IAP proteins were proteolyzed to produce 26- and 55 kilodalton  
fragments, the 26-kilodalton fragment appearing in the nucleus.
